EXPERIENCE

GTBank - Software Engineer

(August 2021 – July 2023)

- Led modernization of legacy banking applications to **cloud-native architectures on Azure**, introducing CI/CD pipelines, containerization, and infrastructure-as-code.
- Implemented **PCI-DSS-compliant** APIs and services using ASP.NET Core, JWT/OAuth2, and encryption standards, strengthening data protection and regulatory compliance
- Mentored junior and mid-level developers via code reviews, pair programming, and technical workshops, improving team velocity and engineering standards.
- Collaborated cross-functionally with product managers, DevOps, and QA to translate business requirements into technical solutions and deliver features on schedule using **Agile/Scrum** practices.

Stanbic IBTC - Software Engineer (Contract)

(July 2023 – Present)

- Led efforts to modernize monolithic .NET applications by transitioning to microservices architecture, reducing deployment time and improving fault isolation for critical services.
- Implemented authentication and authorization mechanisms using OAuth 2.0 and Identity Server in .NET applications, enhancing security and compliance with industry standards.
- Led the development of a backend system enabling bank agents to open accounts for customers while optimizing performance and ensuring banking regulations.
- Agile methodologies, including Jira Software.

Vnicom Solutions - Software Developer

(July 2020 – August 2021)

- Refactored and re-deployed legacy codes from Monolith to Microservices and service-based architecture.

- Containerized applications using Docker Images and provided post-deployment support.
- Participated in code reviews to ensure code quality and adherence to coding standards.

Lehinet Solutions - Software Developer

(May 2017 – March 2020)

- Integrated various commercial & Affiliate REST and SOAP services using .NET (C#) and third-party services generating millions in revenue.
- Collaborated as a team to maintain and deploy on Cloud Storage and Cloud functions (Azure) to manage and monitor integrations.
- Refactored customers codebase from synchronous to asynchronous thereby avoiding performance bottlenecks and enhancing application responsiveness which increased users and revenue by 30%.

Iroko TV - Data Analyst Intern

(February 2015 - July 2016)

- Contributed to large scale data for analysis and processing (internal based).
- Worked with Database Management Systems (SQL and NoSQL).
- Built and managed projects used by various customers.

PROJECTS

♦ Digi Assist (StanbicIBTC) -

Developed the backend for a financial application that enables bank agents to create accounts for customers seamlessly and also transact seamlessly. Designed and implemented secure authentication, data validation, and API integrations to enhance user experience and compliance with banking regulations. Optimized performance, improved system scalability, and ensured data integrity within a high-transaction environment.

Technology used: C#, .NET, Entity Framework, REST API, SQL Server, Oracle, Dependency Injection, Middleware, Unit Testing (xUnit/Moq), Authentication & Authorization, Microservices, Agile, Polly, Azure.

♦ Clinic Manager (EDMS) -

Part of a team that developed a comprehensive clinic management system for a Canadian healthcare company, streamlining patient records, appointment scheduling, and billing processes. Leveraged modern technologies and industry best practices to implement robust features and ensure compliance with healthcare standards.

Technology used: .NET Core, REST API, Entity Framework, SQL Server, JavaScript, NUnit, Moq, Role-Based Access Control (RBAC), Encryption, Docker, Agile

♦ Ecommerce App (-.NET Core) -

SKILLS

- ASP.NET CORE
- Micro-Services
- REST API
- CQRS/MediatR
- Docker
- C#
- Clean Architecture/DDD
- Version Control with Git
- GitHub/Gitlab/GitBucket
- Test-Driven Development
- XUnit and NUnit Tests
- Agile
- Azure Microsoft
- Oracle DB
- MongoDB
- Distributed Cache/Redis
- ReactJS

AWARDS

Best Data Analysis Team 2020

Currently Mentoring a team of 3 junior developers

SOFT SKILLS

Problem-Solving & Critical Thinking

Collaboration & Teamwork

Communication & Documentation

Adaptability & Continuous Learning

Time Management & Task Prioritization

Attention to Detail & Debugging

I designed and developed for a client an innovative e-commerce app, revolutionizing online shopping with its user-friendly interface. Key features include a dynamic product catalog system, secure payment gateways, and interactive customer engagement tools.

Technology used: NET Core, REST API, Clean Architecture, MongoDB, Elasticsearch, Polly, Jira, Ocelot, JWT Auth, Azure

♦ **Kay Exchange App -**

Led the development of a comprehensive currency conversion and cryptocurrency trading platform. The site supports real-time currency conversion, buying and selling cryptocurrencies, and integrating with payment gateways for transactions.

Technology used: .NET Core, ASP.NET Core, Entity Framework Core, SQL Server, Redis, Elasticsearch, RabbitMQ, WebSockets, Stripe, Azure/AWS for deployment, and blockchain APIs

Divcon Conference App —

Contributed as a Junior Engineer to the development and deployment of this app.

Technologies used - Bootstrap, JavaScript, Python, Django, Django RF, MySQL.
